PROFESSIONAL SUMMARY

Founding Engineer at Rapidflare building AI agents, safety filters, and evaluation systems for enterprise customers. Lead customer projects from requirements through deployment, combining agent architecture with hands-on delivery. Previously built distributed AI systems, LLM pipelines, and real-time content safety infrastructure.

WORK EXPERIENCE

Rapidflare, Inc Link **Oct 2025 - Present**
Founding Engineer | AI Agents | Evaluation | Safety | Python | Next.js | GCP San Francisco, CA

- **AMD Dev Assistant** Link**:** Led the project end-to-end across product scoping, agent architecture, Discord and Discourse integrations, deployment, and iteration, supporting 200+ user interactions per week since Jan 2026.
- **AI Safety Filter** Link**:** Built real-time, multi-turn jailbreak detection with customer-configurable policies and parallel execution for enterprise agents.
- **Agent evaluation** Link**:** Designed customer-specific evaluation architecture to compare agents, measure answer quality, and trace responses to source material.
- **Inline citations** Link**:** Built verifiable, source-linked answers and automated QA checks to catch broken references and runtime errors in agent responses.
- **Pre-sales automation:** Built AI-led onboarding workflows that cut a week of manual work to within 3 hours and raised sales-call acceptance over 10x.
- **Customer delivery:** Own requirements and implementation across 5 customer projects, from discovery and stakeholder reviews through technical delivery.

ARC Lab Link **Dec 2024 - Dec 2025**
Research Assistant | HPC | Python | Linux | Train | Data Mining | Huggingface | Tempe, AZ

- Conducting research under Prof. Ben Zhou, enhancing multilingual capabilities of language models through data mining and model training in an HPC environment
- Leading research design and analysis for model training and evaluation, optimizing efficiency and scalability across distributed GPU clusters

Arizona State University **May 2024 - Dec 2024**
Research Aide - Software Engineering Role | Full-stack | Next.js | Supabase | YOLO | Git | Tempe, AZ

- Built a Full-Stack OCR system using Next.js, Flask, AWS Textract, and YOLOv8, reducing truck gate processing time from 5 minutes to 5-10 seconds

NGL Transportation INC **Jan 2022 - Jan 2023**
Software Engineering Intern | Machine Learning | Python | Automation | AWS | Phoenix, AZ

- Developed and optimized a Yard Management System (YMS) leveraging machine learning for real-time tracking, managing 1,000+ daily transactions via SQL and AWS S3

TECHNICAL SKILLS

Python, TypeScript, JavaScript, Java, C++ | Next.js, React, Flask, REST API | Elasticsearch, GCP, AWS, Supabase, Redis, LangChain, n8n, Docker, Git, Linux, Jira

EDUCATION

Arizona State University, Ira A. Fulton Schools of Engineering | GPA: 3.76/4.0 **Dec 2025**
B.S. Computer Science | Dean's List (2023-2025) | NamU Scholarship (2023-2025)
